

Ekeland free-cone angle e_v spans the full range from
convex saturation down to sharp recesses (all computed by the real code)

(a) convex: saturates at 180°
for every $D_{\max}$

(b) shallow concavity:
 $90^\circ < e_v < 180^\circ$

(c) deep concavity:
 $e_v < 90^\circ$
